

## Installation Instructions CodeSource® for PalmOS

### System Requirements:

PC running Windows98, WindowsME, Windows2000, or WindowsXP (Home or Professional) and Palm Desktop already installed on the PC.

*Handheld device running PalmOS version 4.1 or later. This handheld must contain an expansion card slot and at least 3 MB of available internal memory. If your unit has less than 40 MB of internal memory free, you should insert an expansion card with at least 40 MB available.*

### Preparation:

Please HotSync your handheld before beginning the installation process. This will insure that your existing information is properly backed-up. Leave the device in the HotSync cradle or connected to the HotSync cable. Because the CodeSource® data files are so extensive, it may take up to approximately 30 minutes to complete the installation process. It is important that your PC remain available throughout this period, so please disable any screen savers or power savings options on the PC.

### Installing the CodeSource® program files:

1. Start the installer program, named "InstallCodeSourcePalm" directly from the CodeSource® CD-ROM. The installer screen should appear. You can click the "Info" button at any time to review these instructions.
2. Click "Next". The HPC, Inc. End User License Agreement will appear.
3. Click "I Accept" to indicate your approval of the Agreement. If you do not approve, CodeSource® may not be installed.
4. Click "Next". The destination folder screen will appear. You may change the default HPCSoft directory here, if necessary. All CodeSource® files will be installed to this location on your PC.
5. Click "Next". If more than one handheld has been HotSynced to the PC, the account selection screen will appear. The License Agreement only allows you to install CodeSource® to ONE handheld device. Please click the "Clear All" button and then click on the User Name of the device to which CodeSource® should be installed. You will have to provide this User Name when registering the software.
6. Click "Install". CodeSource® files will be extracted from the CD-ROM and placed in the HPCSoft directory. When the Completing Installation screen appears, place your device in the HotSync cradle (or connect via HotSync cable) and press the HotSync button. This will download CodeSource® files to your handheld.

### Installing the CodeSource® data file:

Much of the CodeSource® data is contained in a large data file which must be installed onto an expansion card unless your handheld device contains sufficient internal memory (currently, only two models, the TungstenC and the Tungsten3, have enough internal storage space). You will do this using the installation tools provided by the

manufacturer of your device. If your handheld is the Palm or PalmOne brand, this tool is usually named "Quick Install" and works with SD cards. Sony devices provide the "Msexport" tool for installing files to MemoryStick expansion cards.

After completing the program file installation steps above, open the HPCSoft\CodeSource for Palm directory on your PC. Its default location is "C:\Program Files\HPCSoft\CodeSource for Palm". This directory contains all of the program, data, and documentation files for CodeSource®. The file named "Bitt-CSrc.pdb" must be installed on your handheld (either to an expansion card or internally).

Start your Palm Quick Install, Sony Msexport, or other Install Tool. On many PCs, this will be found in Start | Programs | Palm Desktop | Palm Quick Install. Or, you may simply double-click the "Bitt-CSrc.pdb" file name. From the User drop-down list, select the name of your device (should be the same HotSync name used earlier). Using the Add File button, add the "Bitt-CSrc.pdb" file described above to the Expansion Card or Handheld panels. This may also be done via drag-and-drop. Be certain that the selected destination has adequate room (40 MB). Please check that an Expansion Card is selected as the destination, that the Expansion Card is installed in the handheld, and that the correct HotSync User Name is selected.

Now, HotSync your device. This may take from 5 - 25 minutes, depending on your unit's speed. If you experience difficulties installing the data file to an Expansion Card, please contact HPC support. Pre-installed SD/MMC cards are available for a nominal fee if you are unable to complete the installation yourself.

### Technical Support:

If you need help with any aspect of CodeSource®, you should first go to the on-screen help in the program. HPCSoft™ has provided extensive help information to easily guide you through the program. If you are unable to resolve a problem, call HPC at:

Tel: 847-671-6280  
800-323-3295  
Fax: 847-671-6343  
Monday - Friday, 8:00am - 4:30pm (CST)

If you are having any difficulties with Palm™ Operating System, refer to your Palm™ User Manual or contact Palm, Inc. direct. HPCSoft™ technical support is free of charge to registered users. A registration card is supplied with this product. Please have your serial number handy when contacting HPCSoft™. When contacting us by phone, it is most helpful to be calling from the computer where you need support. This way we can work with you to solve the problem or demonstrate a particular function of the software. To receive support via the Internet, contact HPC at:
